This section includes arithmetic, algebra, probability, statistics, and geometry problems. The technical terms and general concepts in these test questions can be found in the New York State Education Department P-12 Common Core Learning Standards for Mathematics. Most problems involve application of topics covered in the Common Core; however, since the Common Core is just an outline, not all details of a topic are provided. Consequently, some aspects of a

question may not be mentioned. As one of the purposes of this test is to identify students who will benefit from an education at a Specialized High School, the SHSAT contains many questions that require using mathematical ability to respond creatively to novel situations. The NYSED P-12 Common Core Learning Standards for Mathematics can be downloaded from the New York State Education Department website: www.nysed.gov.
