One of the most renowned carnivores in DK Natural History is the majestic lion. Known for its regal appearance and powerful roars, the lion symbolizes strength and dominance. These social animals live in prides, with each pride having a complex social structure. Discover the intricate dynamics within the pride and witness how they work together during hunts.

The Anatomy and Adaptations

Carnivores in DK Natural History have evolved over millions of years to become formidable predators. From their razor-sharp fangs and claws to their keen senses and muscular bodies, every aspect of their anatomy is honed for hunting and survival. Let's explore the fascinating adaptations that allow them to excel in their respective environments.

A prime example is the cheetah, renowned for its incredible speed. With a streamlined body and long legs, it can reach speeds of up to 70 miles per hour in seconds. Witness the agility of this magnificent creature as it effortlessly hunts its prey on the vast plains of DK Natural History.

WEIGHT (ADULT)
44-55kg (97lb)

HEIGHT (ADULT)
1m to 1.1m

TAKE SPEED
70 mph

DIET
Honeybadger, meerkat, small mammals & large ground squirrels

CHEETAH

Africa's most endangered wild cat, the cheetah is best known as the fastest land animal in the world - reaching speeds of up to 70mph in just three seconds!

Identified by their distinctive black spots on golden-brown cheetahs are mostly found throughout sub-Saharan Africa, but are also found in South West Africa & southern India. Cheetahs are mostly solitary, but some males can be found in small groups. Males are often solitary or form loose coalitions usually with sibling males. Cheetahs always stalk and chase their prey before attacking.

THE CHEETAH CAN TYPICALLY BE FOUND IN:

- Botswana
- Kenya
- Zimbabwe
- Mozambique
- Malawi
- Tanzania
- South Africa
- Namibia
- India

Cheetahs spend daybreak and dusk stalking and chasing prey, with their preference for food mainly being gazelles. When caught, food is hidden but is often taken by vultures and other scavengers.

DID YOU KNOW? Cheetahs can't see better than their adult cheetah counterparts when they're young, but they do have better night vision. In order to see their prey better at night.

12

Cheetahs typically live for 10-12 years in the wild, but have been known to reach 20 in captivity!

Cheetah claws don't retract entirely, helping them to grip the surface when chasing prey.

Cheetahs have incredibly muscular hearts, larger than normal, large and flexible to help process more oxygen when running.

Cheetahs only need to drink every 3-4 days, and can go without water for up to 10 days.

DID YOU KNOW?

Cheetahs talk and communicate and they will hiss when running.

A cheetah's stomach will only fit up to eight water bottles.

Cheetahs have multiple muscles from their spine to the center of their heads which reflect the game of the sun.
