A compelling and controversial nonfiction in the tradition of Graham Hancock, Fingerprints of the Gods, Magicians of the Gods and Forbidden Archaeology. The Myth of Man challenges modern perceptions of the origins of mankind and the rise of civilization – bringing Atlantis, giants, Bigfoot, and the worldwide flood myths back to life.

History is wrong. Much of what is known about humankind and our mysterious past originates from a lot of unsubstantiated guesswork and scientific dogma which has corralled the general populace into accepting outdated notions of human origins and the rise of civilization.

The Myth Of Man reveals suppressed information and hidden history which contradicts these current paradigms of thought regarding the origins and development of Man.

Forbidden archaeology challenges Darwin's evolutionary model and reinforces the possibility that our species originated much further back in antiquity than is considered acceptable by the present day scientific establishment.

Could some of the world's most enduring myths such as giants, Bigfoot, Atlantis and the Great Flood actually be grounded in reality contrary to modern thinking?

And how do these myths fit into the larger context of human progress and evolution?

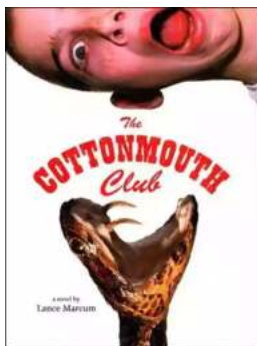

What could the presence of anomalous artefacts around the world tell us about the technological capabilities of our advanced and ancient ancestors?

Maybe it is time for a total reappraisal of ancient history in order to fill the blank pages of prehistory and rewrite the amazing story of humankind.
